01.25.2016
FOR IMMEDIATE RELEASE:

RollCall Systems, Inc. (RCS) formed to develop wireless roll call voting and audio/microphone control systems for local government and university voting bodies

"Our products focus on the typical pain points in conducting a democratic, open meeting – specifically voting and debate management, said Victor Kluck, President of RCS. From a technical standpoint, our systems do this through the use wireless keypads or tablet devices for the voting process and wireless audio and microphone control systems to manage the debate process."

These systems help boards, councils, committees, etc., to meet the challenges of legislative groups complying with open meeting statutes.   Through the creative use of technology, RCS has been able to match, and in many cases exceed, the quality of more expensive solutions - often at less than half the cost. Also, these products are a la carte, so the technology can be "right sized" to precisely fit the organization's needs. The current RCS product lineup consists of two products, RollCall-Pro and RollCall-Audio.

RollCall-Pro is a completely portable wireless electronic roll call voting system that consists of wireless keypads for members and the controlling program for the clerk. This wireless system tallies the vote, generates the pass/fail outcome based on the voting criteria in place, creates an electronic voting record to print or cut/paste from, and projects each meeting step for all to see. RollCall-Audio is a wireless microphone control system with request to speak (RTS) sequencing that gives the chairperson touchscreen on/off control of all the microphones in the room. It can be easily integrated to provide control over almost any existing microphone system.

RCS is planning to launch a new RollCall-Pro product in the first quarter of 2016. This product will be an iOS and Android-based app that allows voting bodies to use smartphones and tablet devices to create a wireless electronic roll call voting system wherever the group can connect to WiFi.

Although RCS is new, it traces its roots to Current Works, Inc. (CWI) - a company that has been in business since 1988 and has to its credit over 27,000 customers. As Bob Schroyer, President of CWI states, "It really made sense to spin off a portion of the company to focus on the development of new applications for our open meeting systems. This allows each company to focus on what they do best." CWI will continue to specialize in wireless hardware for voting and educational markets while RCS will concentrate on developing programs and applications that support the open meeting ideal for legislative markets.
